

# Flexible Shafts & Complete Drives for Food Preparation

S S White Industrial's shafts are used in a variety of food applications. For example driving the cutting disks of meat slicers, kebab knives, and in abattoirs. These are supplied as shaft on their own, standard MasterFlex and LinkFlex products, and as bespoke assemblies. The specialist hygiene environmental considerations of these applications mean that compatible flexible casing and end fitting materials are used where required beyond the materials employed in Industrial, Aerospace, Military and Automotive applications.

Bespoke application specific casing and interfaces

S S White Industrial is a leader of flexible shafts. The company designs and manufactures its products in UK. S S White Industrial is approved to BS EN 9001, AS9100, aerospace, TS16964, automotive. The flexible shafts are produced in small quantities for industry and large volumes for the automotive sector.

SSW flexible shafts can be used as an alternative to other methods of power transmission.

SSW flexible drives are used to join, to take up lateral offset, to take up angular offset either with or without casing depending upon length.
